

KRISHNA SWATHI PEETHA

Salt Lake City, UT 84102 | (385) 567-6427 | krishnaswathi.peetha@gmail.com | [GitHub](#) | [LinkedIn](#)

EDUCATION

David Eccles School of Business, University of Utah

Salt Lake City, UT

Master of Science in Information Systems

December 2024 (expected)

Relevant Courses: Database Theory and Design, Data Visualization, Advance SQL, Data Engineering, Project Management

BVRIT Hyderabad, JNTU University

Hyderabad, India

Bachelor of Technology in Electronics and Communication Engineering

August 2021

Relevant Courses: R Programming, Java, Python, Financial Analysis, Mathematics, Relational Database Management System

TECHNICAL SKILLS

Programming/ Databases/Cloud - SQL, Python, R, Java, C, MySQL, PostgreSQL, Microsoft SQL Server, Oracle, Azure, AWS

Data Visualization tools - Power BI, Tableau, Domo, Cognos, Matplotlib, Looker Studio

Machine Learning & Statistical Analysis - Regression, Hypothesis Testing, Predictive Modeling, Descriptive Statistics

Other tools/skills - Microsoft Excel (Macros, Pivot Tables, VBA), MS PowerPoint, GitHub, Jira, SharePoint, Power Query, DAX, Power Apps, Power Automate, PowerShell, Snowflake, Agile, Scrum, Prism, HTML, CSS, JavaScript, SAS, Big Data, Fabric

EXPERIENCE

Capgemini Technological Services (Financial Services Business Unit)

Hyderabad, India

Data Analyst

August 2021 - July 2023

- Collected, cleaned, maintained large data sets, and conducted EDA according to business objectives.
- Performed data validation and ensured data integrity across multiple sources and utilized Excel, Python and SQL for Data Manipulation
- Developed interactive dashboards and visual reports using Power BI and Tableau for compelling data storytelling, provided recommendations for process improvements, improving stakeholder decision-making efficiency by 35%
- Automated data workflows with Python, reducing manual data processing efforts by 40%, and designed ETL pipelines to ensure accurate and timely data flow, leading to a 30% improvement in data update speed.
- Collaborated with cross-functional teams to understand business processes, prepared test plans and conducted thorough data quality assessments, enhancing data reliability by 20% and reducing data errors by 15%.
- Applied data mining techniques to identify patterns and trends with analytical and problem-solving abilities, providing actionable insights that drove strategic initiatives and performed risk analytics.
- Maintained detailed documentation of requirements, design, development and testing and followed best practices.

Analytics Intern

April 2021 - July 2021

- Consolidated complex datasets using Excel and SQL, eliminating data redundancy and provided analytical support
- Closely worked with senior data analysts and built Tableau dashboards to visualize core business KPIs, metrics, saving 4 hours per week of manual reporting work.
- Actively engaged in acquiring new skills. Dedicated 100+ hours in continuous learning and research through workshops and training sessions to broaden the skills and keep up with the trends.

Engineers Hub

Hyderabad, India

Software Engineer Intern

December 2020 - February 2021

- Designed and implemented data model solutions and database schemas to store and retrieve large volumes of structured and unstructured data efficiently.
- Improved code quality metrics by 30% through the implementation of feedback from performance code reviews.

PROJECTS

Wide World Importers Data Warehouse

- Developed Wide World Importers Data Warehouse project using Microsoft Fabric. Designed and optimized dimensional models and end-to-end data pipelines from source systems through staging to presentation layers.
- Created interactive Power BI dashboards providing valuable data insights.

Financial Data Analysis

- Developed and monitored key financial metrics of the data and compared favorable and unfavorable loans
- Created dynamic data visualizations in Power BI leading to a 20% increase in decision-making
- Managed and integrated loan data using MS SQL Server, ensuring seamless integration with Power BI for real-time data analysis. Tested and validated data visualizations in Power BI using SQL queries, ensuring high accuracy and reliability of financial insights.
